

# COVID-19's Impact on the Stock Market

*Alexander Daou, Uliks Sekiraqa, JingTing Yan,  
Samuel Bedeau, Akshara Ayyadurai*

# Introduction

- Data pertaining to the stock of eight high-performing financial firms across the UK and USA has been gathered through the Alpha Vantage API.
- Data pertaining to eight major stock indices across the globe has been gathered through yfinance.
- Data pertaining to Twitter sentiment analysis has been gathered through the GetOldTweets3 API.
- Pandas and Matplotlib are used to analyse and visualise the stock-related data gathered as line graphs, comparing the various stocks and indices over time. The Twitter sentiment data is visualised as a bar chart, for positive and negative reactions over time.

# Financial Firm Stocks

- Goal: Illustrate how the COVID-19 affected top financial firms in US and UK stock market.

*4 from US:*

JP Morgan  
American Express  
Wells Fargo  
Morgan Stanley

*4 from UK:*

HSBA  
Banco Santander  
Lloyds Banking  
Royal Bank of Scotland

## Data Collection

Fetches real-time and historical stock prices from AlphaVantage API.

## Data Analysis & Visualisation

# Stock Indices (Yahoo Finance)

- **Goal:** See trends with the stocks closing price throughout this year.

Reading data through Web  
Scraping

Data Cleaning

Operated on the data

Created graphs to visually see  
relationships

Conclusion on data

8 Stock Indices: NASDAQ, DOW JONES, S&P500,  
FTSE100, NIKKEI 225, DAX, EURO STOXX, SSE

	Open	High	Low	Close	Volume	Dividends	Stock Splits
Date							
2019-07-16	7531.7	7590.1	7524.5	7577.2	607182100	0	0
2019-07-17	7577.2	7577.2	7519.2	7535.5	576654300	0	0
2019-07-18	7535.5	7535.5	7482.6	7493.1	504046800	0	0
2019-07-19	7493.1	7546.7	7475.5	7508.7	575615700	0	0
2019-07-22	7508.7	7549.7	7491.8	7514.9	513122700	0	0

We only wanted the values from the 'Close'  
column

	Close
Date	
2019-07-16	7577.2
2019-07-17	7535.5
2019-07-18	7493.1
2019-07-19	7508.7
2019-07-22	7514.9

# Data Loading

## STOCK INDEX DATA

PIP install yfinance

Import yfinance

Ticker module

eg.

```
yf.Ticker("MSFT").history(period="1y")
```

## COVID DATA

Import Pandas

read\_csv module

Reading the url of data  
from WHO

eg.

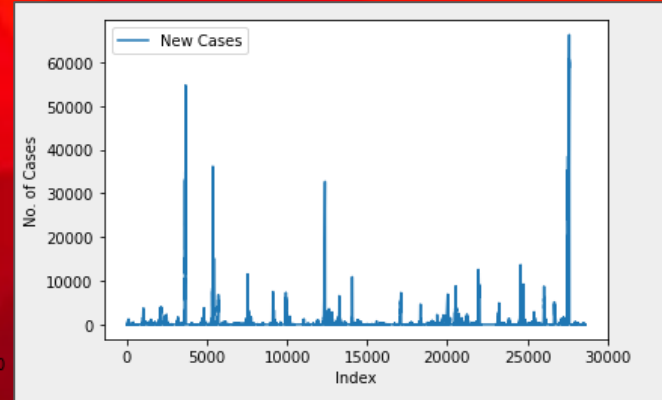

```
pd.read_csv("https://covid19.who.int/data.csv")
```

# Data Cleaning

1. Checking for Nan values using `isnull()`
1. Checking for Duplicate Records using `duplicated()`
1. Dropping the duplicate records using `drop_duplicates()`
1. Replacing negative values in No. of cases column of covid data to 0.

Number of records before and after dropping the duplicates

```
-----  
Before (dowjones): 254  
After (dowjones): 253  
Before (ftse): 255  
After (ftse): 252  
Before (SSE): 243  
After (SSE): 240
```

# Data Visualization - Covid vs Stock

## Covid Cases vs Stock Indices - USA

## Covid vs Stock Indices - UK

# Data Visualization

## Covid Cases vs Stock Indices- China

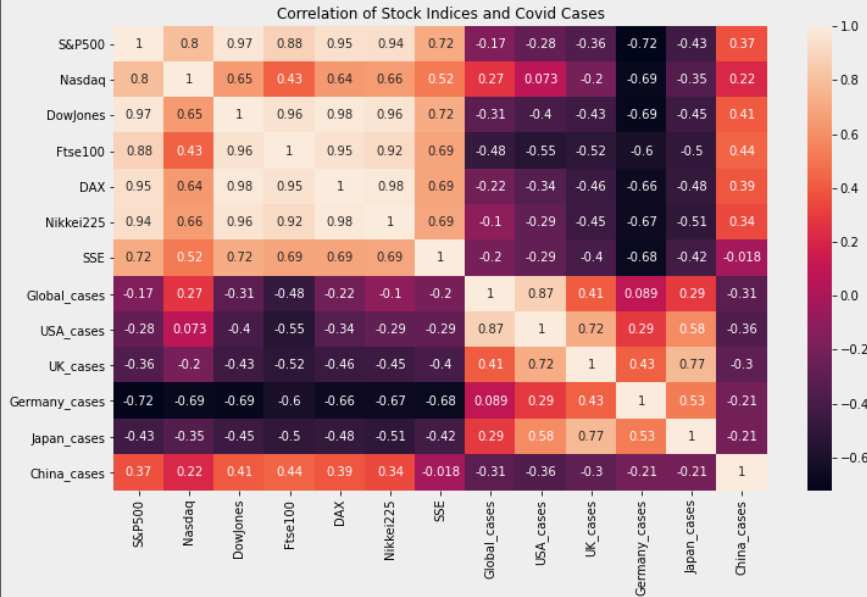

## Covid Cases Vs Stock Indices - Germany

# Correlation

## Stock Indices and Covid Cases

## Among Stock Indices

# Twitter Sentiment Analysis

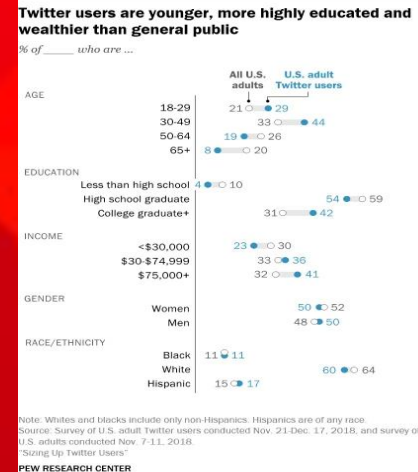

- **Goal: Analyse the public moods toward COVID-19 from Feb 2020 to Jun 2020, and see if there are any correlations between public moods and stock market conditions.**

Benefits of sentiment analysis:

- Provides an understanding of the general public's feelings - 330 million users as of April 2019.
- As shown in the graphic below, the average Twitter user being highly educated and more wealthy provides us with a more representative sample of people that could be involved in investment and trading

Limitations with sentiment analysis:

- Nuance is missed (sarcasm/ironic tweets can be misinterpreted)
- Data samples - limited to tweets from certain regions/areas, as well as timescale.
- Is still a new part of data science, so exploration into the field is still shallow - thus limited access to fully functional APIs

# Twitter Sentiment Analysis

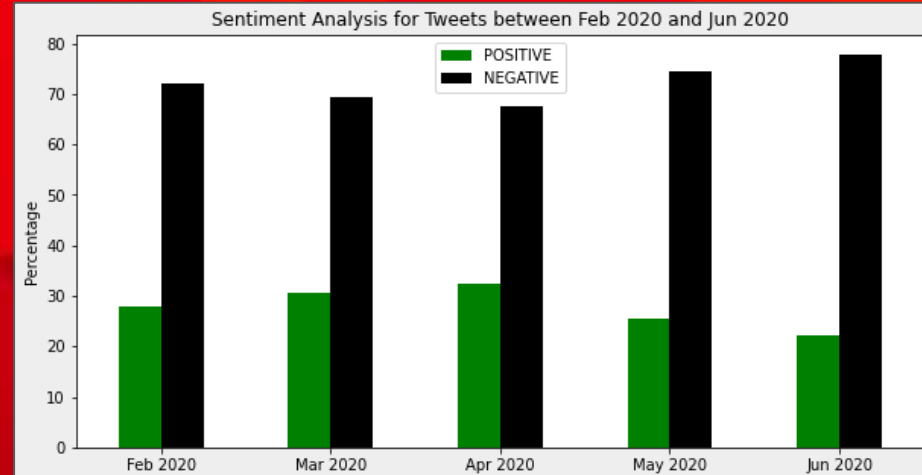

## Process:

- Train a text classification model using the Sentiment140 dataset
  1. Load & explore the dataset
  2. Text preprocessing
  3. Split train and test dataset
  4. Tokenization
  5. Label encoding
  6. Word embedding using Word2Vec
  7. Sequence model training using LSTM
  8. Evaluation
- Predict the sentiment of COVID-19 tweets
  1. Tweets extraction using GetOldTweets3
  2. Text cleaning
  3. Sentiment prediction
  4. Visualise the results

Criteria: keyword = **COVID**, location = **New York**, max tweets per day = **1000**

Analysed **32,856** tweets in total.

The model has **78.84%** accuracy, **44.95%** loss.

# Causation

- Brought on by the pandemic's uncertainty, stock indices plummeted as a result of traders panic-selling. The S&P 500 circuit breaker was triggered four times in March alone, on the 9th, 12th, 16th, and 18th.
- Central banks in many countries slashed interest rates in response to this. The Bank of England did so in mid-March, making borrowing cheaper and encouraging spending to boost the economy.
- The pandemic has also indirectly caused stock values to suffer, by altering the world population's lifestyle. With most individuals remaining indoors, oil stock has tanked as many are no longer driving. The commercial airline industry has been impacted severely, with heavy hitters such as EasyJet completely dropping off the FTSE 100 index after all flights were cancelled.

# Conclusion

**Future Works:**

**Comparison of Foreign Exchange  
Market and GDP with Covid and Stock  
Exchange**
